NEXION ABOUT

Nexion is a brand of Nexion Surfaces, a multinational ceramic company that is the result of a partnership between two large family groups that have always been leaders in their reference markets: Ceramiche Speranza, the best in its class Italian firm founded in 1961, that has setup the state of the art manufacturing facilities in India together with the Aghara family, one of the leading players in ceramics and sanitary-ware in India since 1977.

With mastery of technology and design, we turn the best of the Italian tradition and lifestyle into contemporary ceramic surfaces that can be source of inspiration for architects and designers around the world.

Open-minded and keen to learn from customers and partners, we are committed to deliver the best quality and service and we believe that our work ends when our clients fulfill their desires and achieve their goals.

NEXION'S ESSENCE

We're relentlessly focused on reaching outstanding goals in the field of sintered stone slabs and to stay on our **commitment to excellence in manufacturing high quality slabs and large size tiles.**

To us excellence comes from passion and experience. **Passion and experience in mastering creativity, design, technology and process management.**

We always aim to the highest standards but we also allow for evolution and new valuable ideas. Italian creativity is in our soul: Nexion products are defined by quality, high standard and design. Materials blossom under the genius mind of Italian R&D and designer's team.

Never content to settle for the status quo, we also focus on a consulting approach cater to find new advanced solutions to our demanding clients.

Nature is an endless source of inspiration just as man-made materials are canvas for new perspectives. Both of these dimensions are stunning, textural, colorful and versatile mediums for designing and creating unique sintered solutions.

"We always aim to the highest standards but we also allow for evolution and new valuable ideas."

OUR COMPANY

Nexion is a brand of Nexion Surfaces, a multinational ceramic company born from the meeting of two large family groups that have always been leaders in their reference markets: Ceramiche Speranza, the Italian firm founded in 1961 that established state-of-the-art manufacturing facilities in India together with the Aghara family, one of the leading players in ceramics and sanitary wares in India since 1977.

OUR COMMITTMENT TO QUALITY

Superior physical and chemical characteristics – together with beautiful aesthetics – are the distinguishing feature of all Nexion collections.

To achieve the highest quality standards Nexion exploits decades of experience and devotes significant resources to continuous improvement.

Nexion's plant in India – the only one co-owned by an Italian and an Indian company – exploits the latest Italian machinery to manufacture high quality slabs and large size tiles.

The plant has a very high degree of automation, as required to consistently achieve the high levels of quality demanded by sophisticated customers in India and internationally.

According to the best practice, quality standards refer to the norms included in ISO 13006: Annex G - EN 14411 and all tests are carried out by renowned laboratories in Italy, accredited according to ISO/IEC 17025:2005.

At the plant, Nexion runs tests on all raw materials, semi-finished goods and end-products through the whole production process, under coordination of the Quality Assurance Department.

To get the best possible result, the company has devised an integrated set of rules, named **Nexion Quality Assurance Procedures (NQAP)**, to control all aspects of slabs manufacturing, that determine the physical and chemical characteristics of products.

NQAP include measurement processes, benchmark values and operating procedures for:

— **Chemical characteristics of raw materials**, asking for every single shipment is tested before the raw material enters into production process.

— **Intrinsic physical properties of slabs and tiles**, such as caliber and dimensions, orthogonality, planarity, water absorption and breaking strength.

— **Usage-related properties of products**, such as resistance to scratch and abrasion, thermal shock resistance, resistance to acid, stains, household chemicals and slippery.

While physical and chemical characteristics are described by norms and are measured objectively, aesthetical quality is left to individual company practices.

This might be an issue for customers, as aesthetical characteristics – such as realism of colors and absence of defects and shade variations – are very important for the beauty of flooring and wall surfaces.

To guarantee the best possible quality to customers, Nexion has devised innovative procedures to guarantee the compliance with original design, absence of defects and stability of product features (color, shade ...) on large production batches:

— **Nexion Shade Control Methodology (NSCM)** to guarantee the absence of unwanted shade variations with reference to the "master slab", approved by the product designer

— **Nexion Light Reflection Qualty Assessment (NLRQA)** to assess the absence of waviness or geometrical distortion of reflection of light by full polished, glossy surfaces

Nexion Shade Control Methodology (NSCM) is used in the Sorting Department to compare production items to the "master slab" originally approved by Product Development and kept in the Product Library of the company.

OUR REACH

Nexion is a global brand that crosses the borders of different countries. The main strategic value chain activities are based in Italy. Our top quality production is located in India into a fully automated state-of-art facility equipped with the latest Italian machineries. Our sales network focuses on specific high-potential and highvalue target markets all over the world.
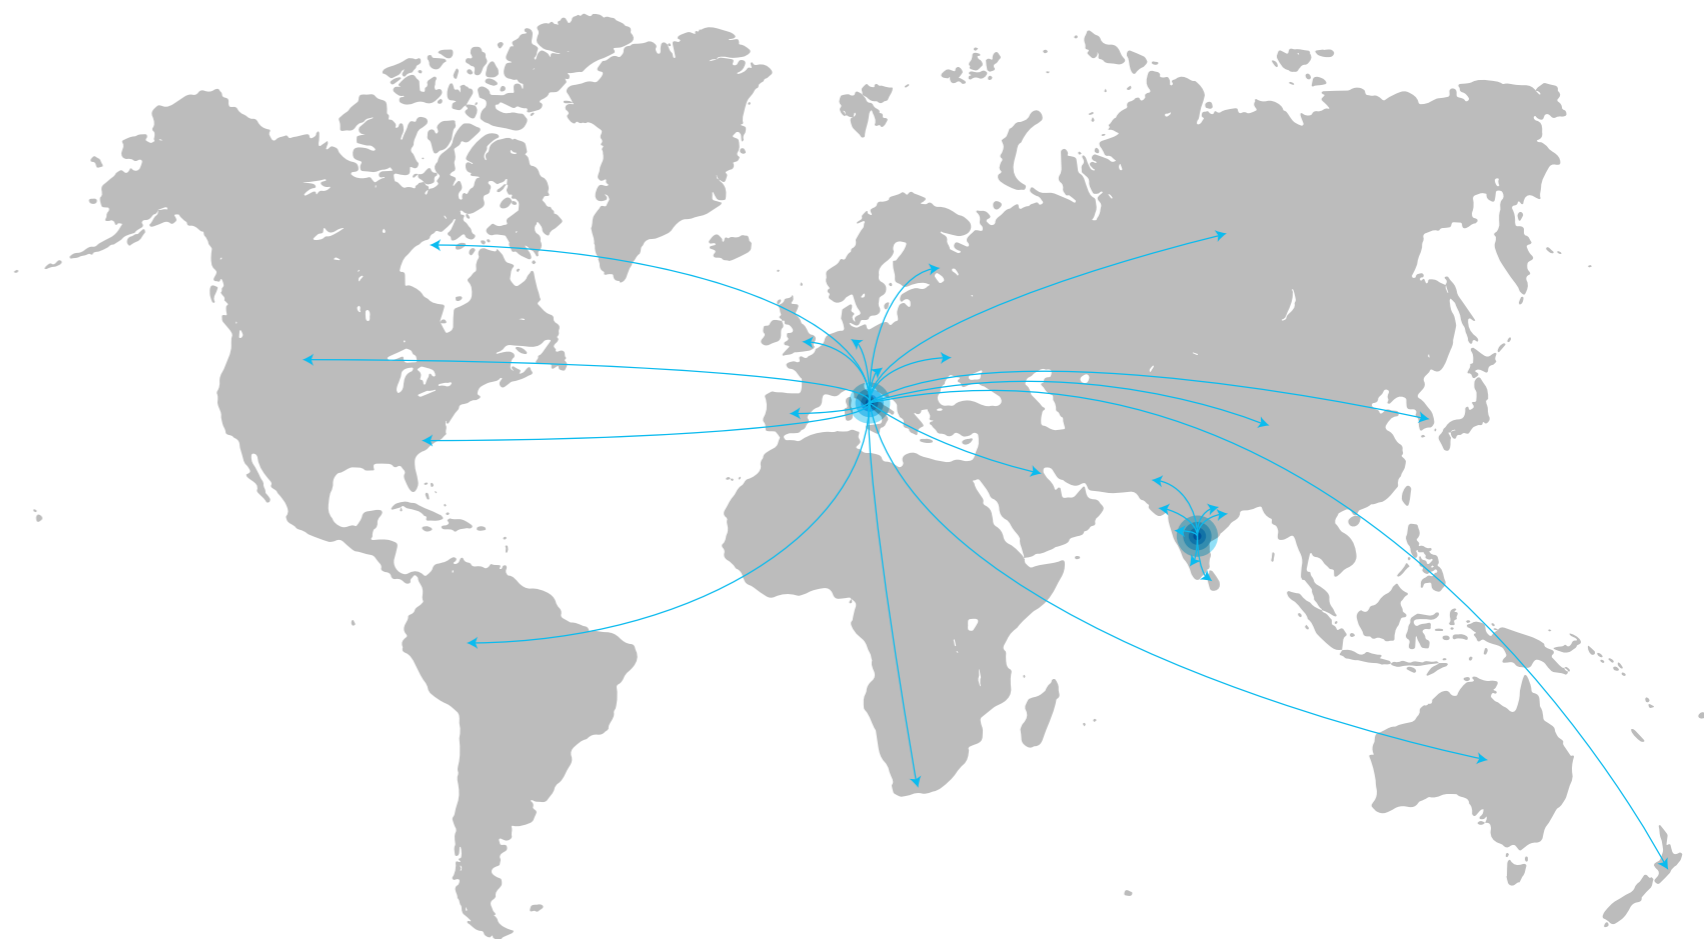

OUR PEOPLE

We nurture our strong **multicultural vocation**: Nexion people are a successful and well integrated team with some of **the top talent of the Italian and Indian culture, both rich in history, tradition and values.** Everyday, over 300 people use their passion, enthusiasm and highly specialized skills to turn the important targets we have set for ourselves into positive results.

"300 people use their passion, enthusiasm and highly specialized skills to turn the important targets we have set for ourselves into positive results."

CSR

The most precious resources are our employees.
For this reason, even before the launch of our plant we have given life to an special program of **"Corporate Social Responsibility" which aims to provide to our employees and their families the best living work-life conditions possible especially in a developing country such as India.**

The CSR program covers different areas: **work conditions, welfare, surveillance and medical assistance**; we dedicate great attention to our employees's worklife balance by providing them high quality amenities and accommodations for their families within our company's compound.

Our purpose is simple as much as essential in nature: we want to create the best possible working-life conditions allowing our employees to live a dignified and satisfying life both inside and outside the workplace.

We are proud of the standards that we have achieved and we hope that, following our example, more companies will commit to improve the working and living conditions of employees and their families.

NEXION SINTERED MARBLE

Thanks to an in-depth study of the finest marbles **we devised many design and surfaces that interpret natural marbles and artificial materials with new high-tech features**, in line with the needs of contemporary architecture.

Our sintered marbles distinguish themselves for their rare beauty, able to give back all the flavor of marbles that have always represented the maximum degree of exclusivity in the construction field, designed and developed for the most refined tastes.

Nexion sintered marble is a modern synthesis between aesthetic richness and technical capabilities, highlighted even more by the multiple variations of surface finishes, striving to obtain the right perceptive effect according to its own design context.

OUR MARBLE SURFACES

Nexion has given to marble collections the beauty of sintered surfaces, designed for the most versatile and modular standard on the market. The result is an **advanced mix of graphic qualities and performance advantages that opens a new era for interior design floors and walls**, making Nexion a unique surface-driven brand in the world.

Full Lappato is the most notable marble surface in interior design. With perfect mirror reflection, obtained by superior glaze quality and master-class polishing, this surface exalts the graphics and the deepness of fine marble slabs.

Lappato Matt is a contemporary interpretation of marble surface, with its characteristic absence of any reflection. Dedicated to the world of design, architecture and furniture.

Naturale is a surface finish that can be appreciated for its well-defined softness. An advanced reworking of the graphic richness of the marbles, available in different floor.

TEXTURES: THE "CHIARO-SCURO" LIGHT EFFECTS

Combining in-depth material research, innovation, and great craftsmanship, Nexion has created three eye-catching **three-dimensional textures**: rigato, pettinato, and bocciardato.

The textures offer the same visual and tactile richness as the most prestigious varieties of marble when they undergo these craft techniques, which are the culmination of centuries of **constant, progressive honing**.

Examining them all in details, the rigato one is characterized by very close parallel lines, running along the surfaces, giving them a very suggestive tactile and visual appeal.

The pettinato texture reproduces a craftsmanship technique that gives a particular 3D effect to the surfaces, through the use of rigid bristle tools in the phases preceding the solidification of the material.

Finally, the bocciardato one reproduces the results of a manual bush hammered technique, much appreciated since ancient times, which gives the surfaces a characteristic slightly corrugated appearance, very similar to that of the natural material.

In all three cases, the result is the creation of up-to-the-minute ceramics that combine the high reflective power of Nexion marble with a textural approach to light that produces striking, **ever-changing visual effects**.

An extremely difficult result to achieve in ceramics and a material that fuses the eternal, timeless charm of marble with a **vibrant contemporary flavour**.

Marble Gallery

We select the best Italian creative minds to find the **finest inspirations to create a new range of refined sintered marbles that perfectly reinterpret natural and artificial materials**, with a stylistic accent that stands out for a sophisticated contemporary taste.

We have always worked on research and development of surfaces, trying to identify ourselves as much as possible with design approaches. This approach is the main road that allows us to create optimal aesthetic with superficial patterns & structures that allow our clients to perceive our product as natural, from a touch & feel perspective to its unparallel beauty.

Sintered Marble blends the design of natural marble with a mirror-like capability to reflect light. This material is an evolution of marble-effect ceramic, a new solution which achieves an almost perfect mirror-like reflection with no distortion or waves in the light reflection of any objects. We are one of the few company in the market to use the precious dry-granula to enhance our product's color nuances, details and wave-free visual impact.

ARTIFICIAL LOOKS AND SURFACES

Concrete, Terracotta and Solid Colors: a wide range of high-tech ceramic materials originally envisioned to meet the most specific and stringent needs of contemporary design.
Products distinguished by a strong architectural vocation, both in terms of style and technical and structural characteristics of surfaces, guaranteeing high standards performance even in the most challenging design contexts.

Endless

Endless collection inherits the expressive power of concrete, a material who wrote important pages in the history of architecture and plays a fundamental role in modern design thanks to the capability to radiate a strong tactile energy to every context surrounding it.

Seduced by the architectonic and stylistic potential of concrete, Nexion examined to the smallest the remarkable artifacts made by Italian craftsmen, characterized by the intense touch and feel of this matter. In its design lab, Nexion worked to give to large size slabs the delicate variations of tones that we find in the small, renown Italian cementine, creating the soft effect of an "endless" surface.

The result is a ceramic collection made unique by the shade variations, sharp patterns and a high tactile vocation, which transmits a timeless and contemporary personality to the surrounding space. A collection that brings the best of the inspiring Italian contemporary design to any type of ambience and location.

Nexion installation suggestions

Nexion recommends 2 mm joint for optimal aesthetics taking advantage of the tiles caliber in multi-sized applications.
Both cement and epoxy grout can be used; grout-design color matching advisable for optimal aesthetics.
It is not recommended to use grouting with colored pigments in contrast with the color of the tiles.
For detailed installation guidelines log on www.nexiontiles.com

Ambient

The Ambient collection offers a new ceramic interpretation of cement, a cornerstone of modern and contemporary architecture, a mix of engineering strength with expressive essentiality.

Our endless in-dept materials R&D, technical capability and craftmanship has led to a new collection that reinterprets its original source in a minimalist way, mixing superior performance with aesthetic appeal.

The result are surfaces with excellent performance that, seen from distance, gives the impression of being solid color with a slight ripple while, looking closer, they are distinguished by a slight grit perceived by our hand.

A proposal originally designed for the most demanding architects, looking for the best of contemporary Italian inspirational design in every type of setting and location.

Nexion installation suggestions
Nexion recommends 2 mm joint for optimal aesthetics taking advantage of the tiles caliber in multi-sized applications.
Both cement and epoxy grout can be used; grout-design color matching advisable for optimal aesthetics.
It is not recommended to use grouting with colored pigments in contrast with the color of the tiles.
For detailed installation guidelines log on www.nexiontiles.com

Terrælino

The Terrælino collection reinterprets concrete, the building material par excellence of modern and contemporary architecture, with a ceramic interpretation that strikes for its organic and natural accent, in the wake of research and aesthetic sensitivity with an unmistakably Italian flavor.

Combining raw materials of excellent quality, an accurate phase of study, and great technical mastery, we have reached a ceramic material that combines the dynamic strength of concrete with the ethereal lightness of an elegant fabric such as linen.

The result is high performing surfaces, in six variations of warm and cold grays and three trendy colors, all inspired by earth tones, which return the evocative image of a hand-made linen texture delicately imprinted on the concrete surface.

A refined proposal originally designed for the most demanding architects, looking for the best of contemporary Italian inspirational design in every type of setting and location.

Terracotta

The inspiration for the Terracotta collection is self-explanatory. The most ancient ceramic material, terracotta - with its characteristic reddish hue and porous consistency - has been used since the dawn of time, in all civilisations, and continues to find contemporary applications. An underlying theme that has accompanied the entire history of humanity, allowing the production of buildings, tools, sculptures, and other artistic creations.

Using its extensive knowledge of the raw material and its equal production mastery, Nexion has chosen a type of terracotta widely used in Italy for the construction of its world-renowned old towns, recreating the color tones and surface finishes down to the smallest details, with three appealing color options offering different levels of light.

The result is a collection that offers the unique personality of an archetypal material with a contemporary language and excellent technical qualities (strength and longevity), making it ideal for complex and challenging architectural projects. A collection that brings with it inspiration from the best of contemporary Italian design, in all settings and circumstances.

STONE AND WOOD LOOKS AND SURFACES

Stone Looks

Stone has always been one of the most appreciated natural elements used in architecture, due to its ability to combine engineering efficiency and design in perfect harmony with the environment. Nexion surface experts have carefully selected few of the most well-known stones to devise new ceramic materials specifically designed for contemporary use. These materials are authentic in style and superior in terms of resistance and durability.

Wood Looks

A careful rework and ceramic synthesis results in two different ways of interpreting and restoring the natural look of precious woods. On one hand "smooth" surfaces, on which knots, veins and other distinctive signs of wooden essences are interpreted looking smooth and soft to the eye, even before touching it. On the other hand, "structured" patterns give to the graphics an evocative tactile consistency. The result of both proposals is surfaces with technical and functional characteristics capable of ensuring the most advanced balancing point between natural style and technical-design performances.

Lithic

Lithic revisits the innate beauty of the natural stone according to Nexion designer style which open the boundaries to new technical features with the revolutionary Absolute Matte finishing.

Four new aesthetics emulate the vivid and realistic shades of natural stone and harmonize the graphics of nature by representing it in sintered stone.

Brightness, texture and Absolute Matte: world's finest materials are re-design and enhanced by an incomparable research and design process to give the material the right texture, touch and look; Nexion present a new revolution in matt surfaces: Absolute Matte, an unparallel soft touch surface without compromising on anti slippery and anti-reflective technical performance of sintered stone.

Lithic offers impeccable aesthetic solutions together with the highest technical qualities of Nexion sintered stone.

Pietra del Cardoso

Pietra del Cardoso collection inherits the spirit of the homonymous Italian stone extracted from the mountains of Tuscany, home of most famous marble quarries in the world (Alpi Apuane).
A material appreciated for centuries due to its extraordinary longevity, resistance, style and functionality.

Nexion has accurately selected some of the most exclusive specimens conveying the essence of Cardoso into a new unique ceramic material, combining elegance with unrivalled technical qualities. Nexion has bring this stone to the next level, devising an extremely durable surface, highly resistant to chemicals, stains and abrasions which makes it particularly suitable for high traffic public spaces.

The result is an extremely wide and versatile offering, divided into six colors, one size, two surfaces finishes.
A collection that bring the best inspiration of contemporary Italian design in every type of space and environment.

Runa

Runa collection brings the essence of the noble and sophisticate character of the slates found in the countryside, villages and historical cities of Northern Europe. Stones that blend harmoniously with the elements of nature in a very contemporary style.

Though these stones are common in Europe, finding the nicest one is not easy.
Nexion has worked to recreate the taste of those suggestive slates that blend naturally in the architectural works of contemporary urban contexts. By the perfection of design and the hands of skilled craftsmen, Nexion has given to the surface of Runa the character of the best natural stones, strong at sight and gentle at touch.

The result is a ceramic collection that returns the sober and harmonious elegance of slates with a modern and dynamic mood. A collection that brings the best of the inspiring Italian contemporary design to any type of ambience and location.

Essenze

Essenze brings the intense taste of four precious woods that are highly appreciated in the architectural field for their ability to combine solidity and durability with refined natural elegance. Through extensive researches, Nexion has selected some of the most renowned varieties of Eucalyptus, Walnut, Middle Oak and Tortora Oak, characterized by fascinating patterns of knots, veins, nuances and other natural elements.

Inspired by their beauty, Nexion has devised a new sintered surface that transmits all the wood warmth and elevate its technical features. Among those, this surface is extremely durable, highly resistant to chemicals, stains and abrasions which makes it particularly suitable for high traffic public spaces. Essenze is offered in 20x120 size to be even more bonded to its natural inspiration.

The result is a collection that interprets the spontaneous and authentic charm of prestigious essences with a modern language, making it functional to the realization of the most ambitious projects. Essenze brings the best inspiration of contemporary Italian design in every type of space and setting.

Nexion installation suggestions

Nexion recommends 2 mm joint for optimal aesthetics taking advantage of the tiles caliber in multi-sized applications.
Both cement and epoxy grout can be used; grout-design color matching advisable for optimal aesthetics.
It is not recommended to use grouting with colored pigments in contrast with the color of the tiles.

Coniwood

Coniwood collection brings the peaceful and elegant essence of the trees that make up the fascinating coniferous forests of Europe. Trees that stand out for the natural flavor of the wood they are made of, that conveys an intense sense of warmth and comfort and a refined time-worn feel.

Not all woods transmit the same sensation of immediate and instinctive elegance. Through accurate research, Nexion has selected the some of the nicest exemplars in the European coniferous forests, unique in their warm tones, intense nuances, and suggestive vein patterns. Inspired by them, Nexion carefully worked out designs that make long planks look beautiful and created natural surfaces by the hands of skilled craftsmen.

The result is a ceramic collection of that returns all the natural flavor, at sight and touch, of natural wood, in an eye-catching contemporary style.
A collection that brings the best of the inspiring Italian contemporary design to any type of ambience and location.

Nexion | Technical info

Nexion is committed to offer to customers the finest Italian ceramic design and quality. Driven by a sense of partnership with those who have decided to promote and sell Nexion branded products, we are also committed to help dealers and sales representatives to be successful in their business.

This Catalogue has been designed to help professional sales representatives to get the best possible understanding of the unique characteristics of Nexion's collections, to the benefit of the advice they give to households, architects and developers and for the best performance of their business.

NEXION'S FOCUS ON QUALITY

Parameters of physical & chemical quality

Though the main focus of customers is on aesthetics, physical features and chemical properties of slabs and tiles are very important for the eventual result of any surface installation and, in the end, for customer's satisfaction.

Physical features are important for the ease and quality of installation and for some aspects of durability, in particular with slabs and large size tiles, that cannot be installed properly if their geometry is not perfect and that might break if not flexible enough (contrary to conventional belief, a slab is more robust if flexible rather than rigid).

The key physical features are:
— **The sharpness and regularity** of geometrical dimensions, as well as the overall surface quality (for whose assessment Nexion has devised a proprietary set of procedures – described in the next section – that goes well beyond ISO norms)

— **The physical properties** that affect installation and durability.

Chemical properties are important for maintenance and other aspects of surface durability, as they determine resistance to stain and acids, as well as cleanability.

Usage-Related Performance Properties
Usage-related features are important for maintenance and other aspects of **surface and body durability**, as they determine the surface performance such as its resistance to traffic, stains and acids, as well as cleanability and slip resistance.

Dimension and surface characteristics
Geometrical characteristics of products are important for the ease and quality of installation:

— **Precise dimensions** are important in particular for large size slabs (above 600x1200 mm), that cannot be installed properly if their geometry is not perfect

— **Flatness** is important in particular for small sizes (below or equal 600x1200 mm) as high quality slabs flex and naturally adjust to the floor (a perfectly flat floor can be easily installed following Nexion Installation Procedure for large slabs)

Intrinsic Physical Characteristics
Physical properties of slabs are important for the durability of the surface, both indoor and outdoor (floors and façades):

— **Very low water absorption** is key to avoid penetration of humidity and chemicals that may create stains, deteriorate the surface or cause breakages of the body

— **High breaking strength and modulus of rupture** are important to sustain weight in flooring applications and to resist high wind load pressure in façades

— The **superior physical performance** of slabs using high quality body and proper syntherization is a key advantage compared to natural stone.

Breaking strength and module of rupture indicate the tiles' resistance to flexion and loads. High values mean that slabs and tiles will not break under weight, with requirements depending on the application (residential, commercial, industrial …).

The high breaking strength of Nexion's slabs and large size tiles guarantee safe and long lasting installation.

Frost resistance, coefficient of linear thermal expansion consider the temperature variables that the ceramic material can be subjected. These tests consider extreme hot-cold environmental situations that may be present in outdoor installation.

Thanks to thermal characteristics, Nexion slabs and tiles can be safely used in exterior.

The number following the letter R - from 9 to 13 – represents the anti-slip property of the tile. These are the characteristics of the 5 slipperiness classes, according to the measurement method foreseen by DIN 51130:

— R9 normal adhesion
— R10 medium adhesion.
— R11 high adhesion.
— R12 strong adhesion.

DIN 51097 provides for the use of the coefficients "A", "B" and "C".

— A medium adhesion, these are the floors that we would normally find in areas where you can access with bare feet.

— B high adhesion, tiles used to cover showers or swimming pool edges

— C strong adhesion. This degree of adhesion is particularly used in the external areas of public places, where the foot traffic is high.

PACKAGING & SHIPPING

Packaging & delivery

Packaging is a fundamental element of customer service, being aimed at allowing maximum use of space/weight available and to minimize the risk of breakages, even on bumpy roads.

Nexion's packaging standards are based on carefully designed box and pallet packaging for the optimal load of trucks and containers.

That is very important when large tiles format are to be delivered and Nexion Logistics Department has devised a number of packaging system depending on product sizes and means of transport, including Euro-size pallets and metal A-frames.

Though shipping usually takes place under the customer's resposnsibility, Nexion is fully committed to help clients manage this activity in the best possible way.

Nexion's Customer Service Department works with clients and logistic companies to arrange for shipments and to guarantee that loading and unloading procedures are properly carried out, in particular at destination.

20x120	19,8x119,8
30x60	29,8x59,8

Tiles are packaged in a random manner and Company cannot guarantee the type of faces inside each package.

INSTALLATION GUIDELINES

1. Handling
— To prevent breakage, we recommended to keep all Large Format Tiles in their original packaging during handling.
— Tiles measuring 60x120 cm or less can be handled by hand.
— To handle Large Format Tiles, we recommend to use lifting tools with a sufficient load capacity.
— The use of forklift is recommended; however, it has to be equipped with following fork details:
- minimum length of 1.2 m if the crates are handled resting on the long side
- minimum length of 2.1 m if the crates are handled resting on the short side
— It is recommended that you handle the A Frame individually.

2. Cutting
— When cutting Large Format Tiles, we recommend to use professional dry cutters. Using other tools may lead to uneven cuts or breakage of the material. It is recommended to check the cutter blade before any cut. A damaged blade increases the risk of damaging.

3. Background
— Prepare a screed with a perfectly flat, dry, compact, dust-free surface, with no cracks or other visible damage. The ideal height difference should be no more than 3 mm, measured using a 2 m spirit level
— In case of slightly cracked or non-solid screed, it is recommended to use as crack preventing mat between substrate & slab. Screed should have suitable hardness and mechanical resistance to stresses due to the final uses. It should be prepared using perimeter bands & all structural expansion joints as necessary. Moisture of the screed must be ≤ 4%.
— It should be according to BS 8204-1-2003 or DIN 18560 standards.

4. Laying with adhesives
— We recommend laying with this technique, which should be carried out by suitably qualified workers with appropriate equipment.
— While choosing the adhesive, we recommend you to bear in mind the following: type of Large Format Tiles (group to which they belong and size), type of surface to be tiled and intended use of room.
— It is recommended to have dry laying before final laying. Direction of tiles can be checked through punches (on the back of tiles).
— Adhesive should be applied on the floor as well as on backside of tiles with 3-4 mm thickness.
— To make corrections, we recommend you to check the material before the adhesive dries
— Adhesive will vary depend on the surface so follow manufacturer recommendation. Cementitious Adhesive (C2 Category - C2TES1) is recommended.
— Apply the adhesive onto the back of the slab with a 3mm trowel and should be well distributed on corners & edges.
— It must be spread over in one direction only. Ideally it should be spread towards shortest direction of the tile.
— Spread the adhesive for one tile (pc) onto the floor substrate using a 15mm U-notch or a 10mm V-notch trowel and following the same direction as previously applied to the back of the slab. Adhesive should have 100% contact with tiles/substrate to avoid hollow sounding.
— It is recommended to start from the centre of the slabs and then move towards the edges.
— Tap the slab with a rubber mallet for a complete fixing ensuring the air is expelled.
— It is recommended to handle slabs with appropriate equipment.

5. Joints
— Deciding where to position the joints is also a part of the work which should be entrusted to qualified workers.

— The joints must be positioned:
- on structural connections (structural joints)
- between the wall and the floor (perimeter joints)
- between one tile and another (laying joints or gaps)
- between tiles and other materials (e.g. pairings between ceramic, linoleum, or wood).
— A 2 mm joint spacer is suggested for all sizes.
— For Large Format Tiles, a 2 mm joint is strongly recommended, as well as proper positioning of spacers on floor sides.
— With help of 2 mm spacer & thanks to a 0.8 caliber (meaning that a 120x240 cm minimal size actually measures 119.8x239.8 cm), different sized tiles can be used within a single floor pattern, while still achieving perfect laying.

6. Use of tile leveling system during the installation
— For optimum surface performances, it is strongly recommended to use a tile leveling system.
• This solution also acts as a spacer for joints, thus contributing to make the installation more accurate.

7. Grouting
— We recommend you to use grout with the same color as the product.
— We recommend you to wait for the adhesive to dry completely before grouting the joints.
— We also advise you to ensure there is no adhesive or dust in the joints.
— Apply the grout using rubber trowel.
— Both cement & epoxy grout can be used. It is not recommended to use grouting with colored pigments in contrast with color of tiles.
— We recommend you to grout no more than 4-5 square metres of tiling at a time. This applies in particular when laying textured, non-slip and polished tiles.
— You are advised to remove all excess grout from the tile surface while the grout is still wet, working in diagonal movements. This applies in particular to tiles laid in outdoor areas.
— Use a damp sponge and perfectly clean water to thoroughly clean the entire tiled surface and the joints.
— We then recommend that you dry the surface with a damp cloth.
— Considering how quickly epoxy grouts set, if these are used, we recommend you to clean the excess grout off immediately with a sponge and plenty of water.
— On the day after grouting, you should give the laid tiles a second cleaning with alkaline detergents.

8. Cleaning after laying
— Thorough initial cleaning is essential to ensure the

tiles a long-lasting appearance over time.
It should not be carried out until at least 4 to 5 days after laying and grouting but no later than 10 days afterwards.
— For washing, we advise you to use an acid-based product, diluted according to the instructions provided by the manufacturer. However, we advise against the use of products containing hydrofluoric acid or derivatives thereof.
— It is a good idea to use a piece of unlaid tile, or a hidden part of the laid tiles, to check the resistance of the ceramic surface to the acid. This applies in particular when laying honed or polished tiles.
— When you start washing, it is worthwhile soaking the tiled surface first of all, focusing in particular on the joints. The acid solution must be left to work for no more than two minutes and must never be left to dry.
— To remove the acid solution, one of the following methods should be used: single-brush machine equipped with a non-abrasive disc, a wet vacuum, or washing by hand. After removing the solution, we recommend you rinse the tiled surface thoroughly.
— In the event that machines are used, we suggest that you finish off the job by hand in the harder to reach spots, such as the corners of the walls

9. Ordinary cleaning and care of surfaces
— For ordinary cleaning, simply wash with warm water and cloths and/or soft sponges. If necessary, neutral detergents can also be used. If you have non-neutral detergents, remember to test their effects on a piece of an unlaid tile or on a hidden part of the tiled surface.
— Abrasive cleaners should not be used on glossy and/ or polished tiles; this kind of detergent can be used on tiles with matt surfaces though; In the event, you should still test the effects on a piece of an unlaid tile or on a hidden part of the tiled surface.
— We also advise against the use of soaps, waxes, or rinse aids.
— To remove traces of grease or oil on the surfaces, we suggest you use detergents with organic or alkaline solvents (pH> 9), rinsing properly at the end.
— In large areas, appropriate industrial washer-dryers can be used, taking care to finish off drying by hand where necessary.
— Abrasive tools (such as metal pads or rigid brushes) should not be used on tiled surfaces.
— After Installation of the floor, it should be properly covered with suitable material in order to prevent tiles from damage or scratches because of on-site processing. It is also important not to drag heavy objects across the surface to avoid scratches.
